

**ML2021Spring HWX Report**  
<Mechanical Engineering> <陳志臻>  
<B07502071>

Public Score	Private Score
31.10	29.68

The methods I used to pass the strong baselines include:

- 1 、 BT: Train for 18 epoch
- 2 、 When you finished the subword unit of mono dataset, youo need to upload a fake file named test.en. After finishing binarize of mono dataset, you need to change the name of test.zh to mono.tok.zh.
- 3 、 Forward: Train for 35 epoch.
- 4 、 Use the parameters of transformer base(Table 3).

(Your report should be written in English. Do not exceed 100 words describing your methods, but you may add comments to your code to make other students easier to understand.)
